ONLINE INTERNSHIP PROGRAMME · DRONE TECHNOLOGY AND PILOT TRAINING

UNDERSTAND THE DRONE. LEARN TO PILOT IT.

A 45-day guided online programme on the engineering, systems and flight principles behind modern drones.

45	100%	7	1
DAYS OF GUIDED LEARNING	ONLINE, LEARN FROM ANYWHERE	LEARNING MODULES	COMPLETION CERTIFICATE

FROM FUNDAMENTALS TO FLIGHT

WHAT YOU WILL LEARN

01 DRONE FOUNDATIONS

Terminology, types, applications, basic structure and essential components.

02 COMPONENTS AND SUBSYSTEMS

Frame, motors, propellers, ESCs, battery, power distribution and flight controller, and what each one does.

03 FLIGHT MECHANICS

Thrust, lift, weight, drag, stability, hovering and turns: the principles that make a drone fly.

04 SENSORS AND ELECTRONICS

Common sensors, what they measure and how they help the flight controller.

05 COMMUNICATION AND TELEMETRY

Radio links, video transmission, telemetry data and how to read key flight information.

06 SIMULATION AND PILOTING

Pilot controls, flight modes, simulator practice and foundational piloting skills.

07 RULES AND RESPONSIBLE USE

DGCA regulations, safety practices, operational responsibilities and compliance awareness.

☆ GUIDED AND STRUCTURED

Each module builds on the one before, from first principles to flight.

LEARN THE SYSTEMS. BUILD CONFIDENCE.

YOUR NEXT STEP INTO DRONE TECHNOLOGY

EGIRE ROBOTICS
Explore Engineer Excel

WHAT YOU GAIN

A STRONG TECHNICAL FOUNDATION
Understand drone architecture, what each component does and how the major subsystems connect.

SIMULATOR-BASED PILOT AWARENESS
Get familiar with control inputs, flight modes and virtual flight practice in a guided setting.

BETTER ACADEMIC PROJECT DIRECTION
Guidance to explore drone concepts and shape suitable academic or final-year project ideas.

A PORTFOLIO-ENHANCING CERTIFICATE
An EGIREROBOTICS internship completion certificate, subject to participation and completion requirements.

INDUSTRY AND APPLICATION AWARENESS
See how drones are used in agriculture, surveying, mapping, infrastructure inspection, cinematography, disaster response and research.

PROGRAMME OUTCOME

WHAT YOU CAN DO AT THE END

You will be able to explain the major components and subsystems of a drone, describe basic flight mechanics and aerodynamics, understand the role of sensors and communication links, interpret introductory telemetry information, and show foundational piloting knowledge through simulation.

YOUR INTERNSHIP INCLUDES

45-DAY ONLINE PROGRAMME
Structured coverage of drone engineering and piloting fundamentals.

PROJECT GUIDANCE
Mentoring support to connect your learning with academic project work.

COMPLETION CERTIFICATE
Issued by EGIREROBOTICS after the programme completion requirements are met.

2 LEARN ONLINE
45 days of guided lessons.

3 GET CERTIFIED
Receive your completion certificate.

This is an online learning and simulation-focused internship. Outdoor flight training, hardware access, regulatory authorisations and a DGCA-recognised Remote Pilot Certificate are not included unless separately specified by the company. DGCA rules may change; please check current requirements before operating a drone.
